Swash-plate  
Axial Piston Pump  
Series K3VG

Data Sheet  
P-1001/06.99  
GB

#### Features

- ◇ Reliable, High Pressure, Long Life Modular Design.
- ◇ Low Noise and High Efficiency.
- ◇ Self-Compensating piston return mechanism.
- ◇ Extensive Range of Highly Responsive Control Options.
- ◇ Auxiliary Gear Pump Option.
- ◇ Rated Pressure 350 Bar.
- ◇ Peak Pressure 400 Bar.
- ◇ High Continuous Power Rating.
- ◇ Fully Balanced Spherical Valve Plate.
- ◇ Infinite displacement control.
- ◇ Hydrostatically Balanced Swash Plate Support.
- ◇ High Load Capacity Bearings.

#### General Description

The K3VG Series Swash Plate Type Axial Piston Pumps are designed to specifically satisfy the industrial open circuit market where noise, efficiency, controllability and extended pump life are considered to be essential. K3VG Pumps are available in nominal displacements ranging from 63 to 560 cm<sup>3</sup>/rev with various pressure, displacement, and combination load sensing control options.

Model  
K3VG

Data Sheet  
P-1001/06.99

**Kawasaki**  
Hydraulic Products

**Technical Data**

For applications outside the following parameters, please consult Kawasaki Precision Machinery (UK) Ltd.

**Hydraulic Data**

## Pressure Fluid

Mineral oil, phosphate ester, fatty acid ester and water glycol.  
Phosphate ester is only suitable for use with FPM seals.

Use a high quality, anti-wear, mineral based hydraulic fluid when the pressure exceeds 207 bar. In applications where fire resistant fluids are required consult Kawasaki Precision Machinery (UK) Ltd. The following chart illustrates the effects on pump life when non-standard fluids are used:

	Fluid Type			
	Mineral Oil	Phosphate Ester	Polyol Ester	Water Glycol*
Maximum continuous Pressure (bar)	350			207
Temperature Range (°C)	-20 ~ +80	0 ~ +60	0 ~ +60	10~50
Cavitation Resistance	#	•	•	•
Percentage pump life compared to mineral oil	100	60~100	50~100	20~80

# = Optimum

• = Acceptable but with reduced pump life

\* = DO NOT EXCEED THE RATED SPEED. Maximum speed for 280cc pumps using water glycol is 1500 rpm.

## System cleanliness

Maximum permissible degree of contamination of fluid is to NAS 1638 class 9 or ISO 4466/1986 code 18/15. Kawasaki recommend a filter with a retention rate of  $\beta_{10} \geq 75$ .

## Viscosity Range

Nominal operating range 10 to 200 cSt (For fluids over 200 cSt contact Kawasaki Precision Machinery (UK) Ltd).

Rated Speeds at suction pressures >or = to -0.1 bar rpm	1800	1800	1800	1500	1800	1500
Maximum operating Speeds at suction pressures >or = to +1 bar rpm	3250	2700	2300	2000	2300	2000
Mass kg	48	68	86	160	160	300

**NOTES:** <sup>(1)</sup> Pressure at which life and durability of the pump will not be affected.

<sup>(2)</sup> Pressure at which functionality of pump is not affected but life and durability will be shortened. Please contact Kawasaki for recommendations.

**CAUTIONS!**

1. Make sure the pump case is filled with clean, filtered fluid of the type used in the system before operation.
2. The pump case must be full at all times to ensure lubrication of the internal components.
3. When installing the tandem pumps (K3VG180DT and K3VG280DT) make sure that both the front and rear pumps are filled with oil through both case drain ports.

**Summary of Control Options**

<b>Power/Pressure Control Code</b>	<b>Displacement Control Code</b>	<b>Description</b>
0	P	Infinitely variable positive displacement control by pilot pressure
0	N	Infinitely variable negative displacement control by pilot pressure
0	E	Infinitely variable positive displacement control by Electrical Proportional Valve
1	0	Power control with maximum displacement stop
1	P	Power and positive displacement control by pilot pressure
1	N	Power and negative displacement control by pilot pressure
1	E	Power and positive electrical displacement control
4	0	Pressure compensation
4	L	Load sense control
7	0	Power and pressure compensation
7	P	Power, pressure compensation and positive displacement control
7	N	Power, pressure compensation and negative displacement control
7	E	Power, pressure compensation and electrical positive displacement control
7	L	Power control and Load sensing. (also available with a combined displacement control option)

**Note:**

When using displacement control at pump delivery pressures below 40bar, a pressure assist signal is required to maintain adequate response.

The pressure assist signal can be provided by either an attached gear pump or an external source.

The optional attached gear pump is recommended for use with all displacement control options.

All displacement control hydraulic circuit diagrams illustrate the attached gear pump.

**Power Setting Codes**

Standard Regulator code at 1500 rpm - pumps without auxiliary gear pump						
Motor Power kW	K3VG Pump Frame Size					
	63	112	180	280	180DT	280DT
11	L4					
15	L1

200						M1
250						H4
280						H2

Example 1 Without gear pump:

Pump: K3VG112-10NR-10??  
 Electric Motor: 22 kW at 1500 rpm  
 Power Set Code: L3  
 Final Mode/Code: K3VG112-10NR-10L3

**Power Adjustment Range**

The power setting can be adjusted via external adjusting screws. The adjustment range of the power control settings at 1500 rpm is given in the table below.

Power control settings (kW) at 1500 rpm						
Pump model	K3VG63	K3VG112	K3VG180	K3VG280	K3VG180DT	K3VG280DT
H - High Power	22.0~33.8	37.0~62.1	55.0~96.5	90.0~150.1	109.4~192.9	197.3~300.3
M - Medium Power	15.6~22.4	27.1~45.6	43.9~75.0	67.3~113.5	87.9~134.5	137.2~239.2
L - Low Power	10.6~18.9	19.1~30.7	29.9~45.6	46.8~75.0	59.9~91.1	93.5~160.0

**Note:**

For additional speed and power settings contact Kawasaki Precision Machinery (UK) Ltd.

**Functional Description of Regulator**

Key to Hydraulic Circuit Annotations	
Annotation	Description
A <sub>1</sub>	Main pump delivery
A <sub>2</sub>	Auxiliary pump delivery
a <sub>1</sub>	Gauge port main pump delivery
a <sub>2</sub>	Gauge port auxiliary pump delivery
B <sub>2</sub>	Gear pump suction
B <sub>1</sub>	Main pump suction
b	Suction gauge port
Dr	Drain
Pi	Pilot pressure
Pc	Remote Pilot Port, Pressure Compensator
Pi	Pilot Port Displacement Control
P <sub>L</sub>	Load sense port
Psv	Pressure Assist Port

**Note:** The optional attached gear pump is recommended for all displacement control options. Hydraulic circuit diagrams illustrate the attached gear pump

Regulator Code	Control Curves	Hydraulic Circuit
<p><b>OP Variable Delivery positive displacement control</b></p> <p>Infinitely variable adjustment of the delivery flow is possible by the pilot hydraulic pressure.</p> <p>An increase in pilot signal will result in an increase in displacement, hence the positive control.</p>	 <p><b>Range of Displacement Control</b> <b>2.5 - 100%</b></p>	

**Functional Description of Regulator (continued)**

Regulator Code	Control Curves	Hydraulic Circuit
<p><b>0N Variable delivery negative displacement control</b></p> <p>Infinitely variable adjustment of the delivery flow is possible by the pilot hydraulic pressure.</p> <p>An increase in pilot signal will result in an decrease in displacement, hence the negative control.</p>	 <p><b>Range of displacement control 15 – 100%</b></p>	
<p><b>OE Variable Delivery Electrical Displacement Control</b></p> <p>Infinitely variable adjustment of the delivery flow is possible by using the pilot voltage. (Utilising a solenoid operated proportional pressure reducing valve). The pilot voltage is used as a power source for the solenoid operated proportional pressure reducing valve; a 10cc gear pump is available which eliminates redundant external piping. This regulator requires an amplifier to provide the electrical signal.</p>	 <p><b>Range of displacement control 2.5 – 100%</b></p>	

Model  
K3VG

**Installation**

**Recommended Pump Mounting**

The pump should be mounted horizontally with the case drain piping initially rising above the level of the pump before continuing to the tank as shown in the illustration below. Do not connect the drain line to the suction line.

The uppermost drain port should be used and the drain piping should be equal or larger in size than the drain port to minimise pressure in the pump case. The pump case pressure should not exceed 2.1 bar as shown in the illustration below. (Peak pressure should never exceed 5.9 bar.)

**Mounting the Pump Above the Tank**

If the pump is to be mounted above the level of the tank the suction line must initially rise above the level of the pump before continuing to the tank as shown in the illustration below. The maximum allowable height the pump can be mounted above the fluid level is 1 meter. The minimum suction pressure should be -0.1 bar or above.

**Installation (continued)**

**Mounting the Pump Vertically (shaft up)**

For applications requiring vertical installation (shaft up) the pump must be provided with additional means to lubricate the front bearing. Do not use a standard pump for this type of application. (Mounting orientation "V" type should be used.)

The oil level in the tank should be higher than the pump-mounting flange as shown in illustration [a] below. If the oil level in the tank is lower than the pump mounting flange then forced lubrication is required through the air bleed port 1 ~ 2 l/min.

When installing the pump in the tank and submerged in the oil, open the drain port and air bleed port to provide adequate lubrication to the internal components.

When installing the pump outside the tank run piping for the drain and air bleed ports to tank (see illustration [c]). If the drain or air bleed piping rise above the level of oil (see illustration [b]) fill the lines with oil before operation.

A check valve with cracking pressure of 0.1 bar should be fitted to the case drain line as shown. Recommended Kawasaki check valves are as follows: (refer to Kawasaki industrial valve information - data sheet C1001)

Model	Recommended Kawasaki check valve
K3VG 63	C10G - 10/01-*
K3VG 112	C15G - 10/01-*
K3VG 180	C15G - 10/01-*
K3VG 280	C15G - 10/01-*
K3VG 180 DT	C20G - 10/01*
K3VG 280 DT	C20G - 10/01*

**Drive Shaft Coupling**

Use a flexible coupling to connect the pump shaft to an engine flywheel or electric motor shaft. Alignment should be within 0.05mm TIR as shown in the illustration below.

Do not apply any radial or axial loading to the pump shaft. For applications where radial or side loads exist please contact Kawasaki Precision Machinery (UK) Ltd. for recommendations.

Do not force the coupling on or off the pump shaft. Use the threaded hole in the end of the pump shaft to fix or remove the coupling.

dial gauge (reading a)  
 $\delta = a/2 \quad 0.025\text{mm}$

dial gauge (reading b)  
 $\alpha = \text{SIN}^{-1}(b/D)$   
 $0.2^\circ$

For engine drives a split type pinch bolt drive flange and flexible coupling is recommended.

**Unit Dimensions – Mounting Provisions for Attaching Gear Pumps (dimensions in mm)**

Size		63, 112, 180, 280	280, 180DT, 280DT
Install form code	Without assist pressure port	7	A
	With assist pressure port	6	
Dimensions (Rule SAE"A" for 63, 112, 180 and 280) (Rule SAE"B" for 280, 180DT and 280DT)	D	82.5	101.6
	H	8	11
	W	106	146
	S	2-M10 depth 16	2-M12 depth 20
	L <sup>1</sup>	43	43
	L <sup>2</sup>	26	26
Dimensions of Spline	Rule	SAE flat root, side fit	
	Number of teeth	13	13
	Diametral pitch	16/32	
	Pressure angle	30 <sup>0</sup>	
	Root diameter	22.22 <sup>+0.279</sup> 5 0	22.225 <sup>+0.279</sup> 0
	Measurement over pins	16.58 <sup>0</sup> 9 -0.067	16.589 <sup>0</sup> -0.067
	Pin diameter	2.743	
Allowable max.torque (Nm)		214	214

**K3VG Regulators**

**Type 1 Power control, Positive & negative displacement control**

**Type 4L Load sense & pressure limiting control**

**K3VG Regulators (continued)**

**Type 7 Power control, Negative or positive displacement control, Pressure compensating or load sense control**

**Type 4 Pressure compensator control**
